

EC perspectives and introduction to EU investments in quantum technology

Gustav Kalbe
Acting Director

DG CNECT C - Digital Excellence and Science Infrastructure
European Commission

Quantum in Europe over the years

First quantum revolution
(1905 – 1960)

QIPC: EU's 1st quantum
program (1998 – 2010)

Second quantum revolution
(2010 - now)

Quantum Manifesto (2016)
Quanteria (2016)
Quantum Flagship (2018)

Digital Decade: Europe to be at the cutting edge of quantum by 2030

Quantum Excellence: Europe (EU+MS) and the rest of the world

Scientific Publications

China increased its quantum-related patent activity across all technologies.

Share of quantum patents by company's HQ country, 2000–21,¹ %

Preliminary	QC	QCComms	QS
China	53.8	54.1	59.7
Japan	15.2	15.4	14.8
European Union	11.2	11.5	14.8
United States	10.0	9.6	4.5
South Korea	4.0	3.9	3.4
Taiwan	1.8	1.8	2.3
United Kingdom	1.2	1.0	0
Canada	0.8	0.6	0
Switzerland	0.6	0.6	0
Russia	0.6%	0.6%	0%

1. Only 50% of headquarters for patent applications are disclosed.

China and the European Union have announced the most public funding planned for QC efforts; Germany has announced most in EU.

Not exhaustive

Announced planned governmental funding¹
\$ billion

EU public funding sources, %

- EU is home to 25% of the global number of QT companies
- 2010: 10 companies
2020: > 70 companies
2022: > 150 companies
- A growing nr of start-ups!

Prospects for Quantum Technologies: Markets and Jobs

QT Markets:
Exponential growth!

Concentration of QT Talent

Size of the enterprise quantum computing market by region from 2017 to 2030 (in million U.S. dollars)*

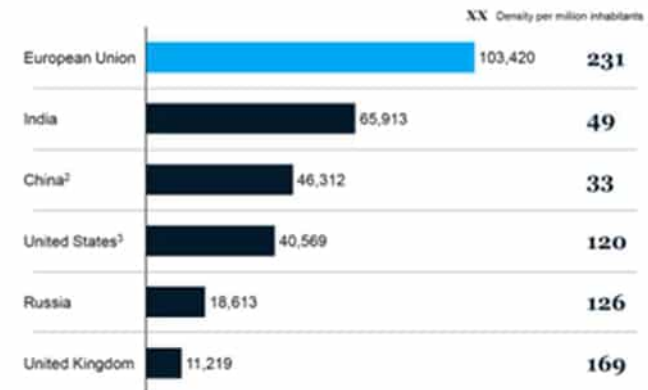

Source
Tractica
© Statista 2021

Additional Information:
Worldwide: Africa; North America: Europe; Central and South America: APAC; MENA; 2017 to 2018

The European Union has the highest concentration of QT talent.

Absolute number of graduates in QT-relevant fields,¹ 2019

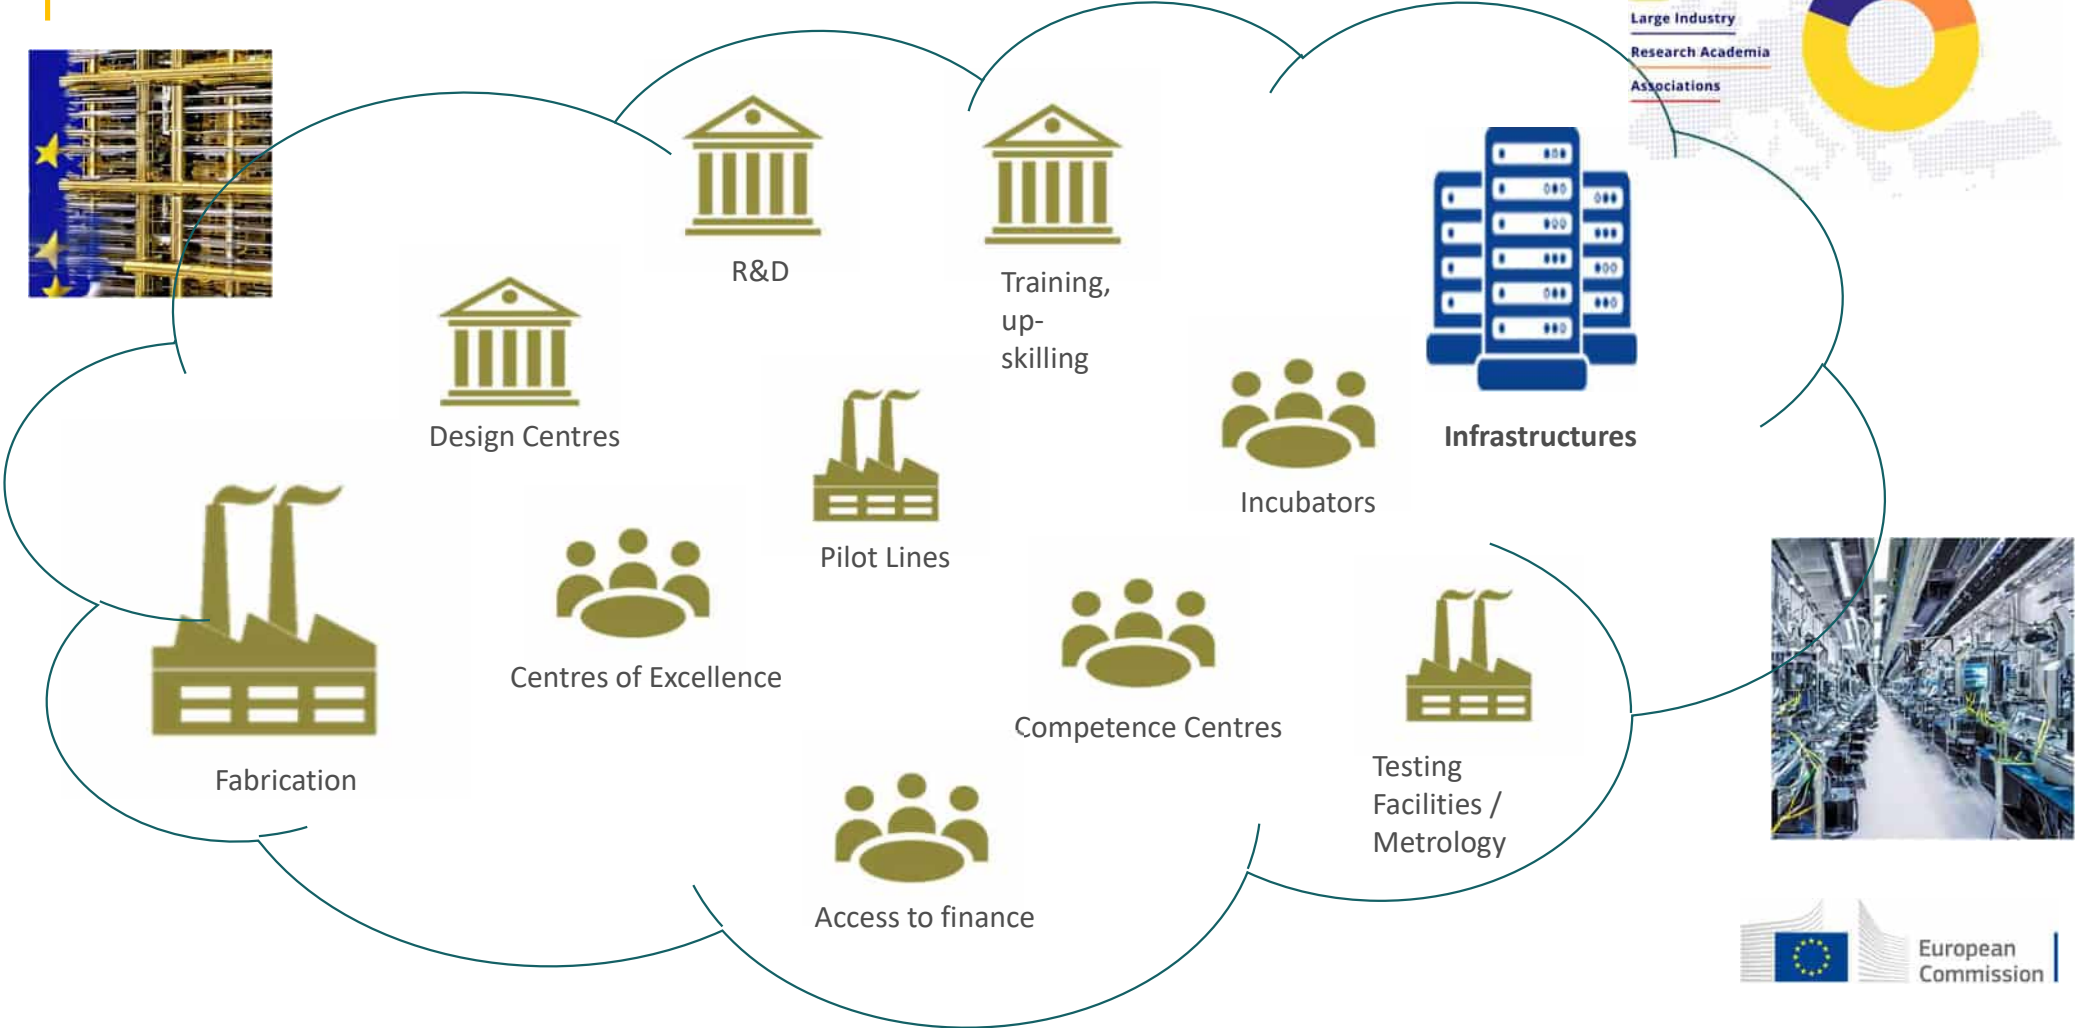

1. Graduates of master's level or equivalent in 2019 in biochemistry, chemistry, electronics and chemical engineering, information and communications technology, mathematics and statistics, and physics.
2. High-level estimates.
3. The actual talent pool for the United States may be larger, as bachelor programs are longer and master's programs are less common.

Quantum in Europe: state of play (2/2)

Equity Investments & Support to Start-ups

Space Gravimetry

Quantum Flagship

IRIS2 & EuroQCI

Quantum Flagship A Success story

21 innovation- and science-driven projects and 3 coordination actions
175 million EUR funding since 2016

1,654 scientists and experts from 236 collaborating organisations in 31 European countries

1,313 scientific papers published (further 223 under review), **105 patents filed and 25 start-ups founded**

Basic science

Quantum Flagship success stories

For a secure digital society and a quantum enabled internet

Simulating complex systems for advanced design and development

Bringing accuracy and performance to unprecedented levels

Computing power to overcome currently unsolvable problems

Addressing foundational challenges for development of quantum technologies

- ✓ **World-leading advances** in cont. variable QKD
- ✓ High efficiency and **multiplexed quantum memories**
- ✓ Development of advanced systems' components

- ✓ Next gen atomic-based programmable Quantum Simulators
- ✓ **Practical quantum advantage**
- ✓ **Pan-European hybrid HPC/quantum infrastructure** (100 qubit analogue sims at FZJ and GENCI)

- ✓ **Diamond quantum sensors** (automotive, medical imaging)
- ✓ First **quantum sensors in space**
- ✓ New MEMS-based quantum sensors
- ✓ Next gen integrated/compact **optical quantum clocks**

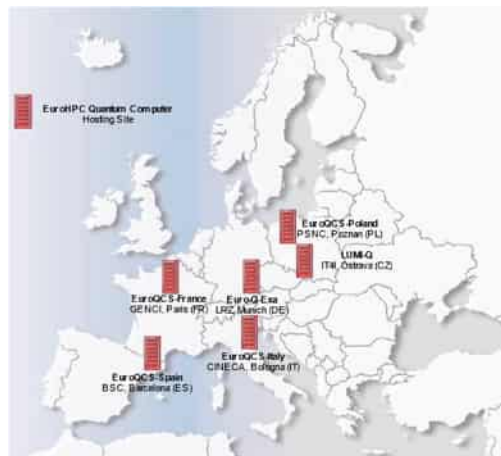

- ✓ 50 qubit **trapped-ions Quantum Computer** (with low power consumption at 1.5KW) deployed and online
- ✓ **25 superconducting qubit device** with 99% 2-qubit gate fidelity built

- ✓ **World record** tuneability of **photon emitters**
- ✓ New single photon detectors
- ✓ High-fidelity quantum gates with microwave-driven ions
- ✓ Compact **entangled** photon-based **light sources**
- ✓ Detection and control of single rare earth ions

Quantum in Europe: Computing Infrastructure

	2019 & 2020	2021	2022	2023	2024	2025	2026	2027
Quantum Infrastructure	1st round 2 quantum simulators interfacing with HPC systems	2nd round 6 quantum computers + quantum simulators interfacing with HPC systems (17 participating states and € 100 M+ procurement budget)			3rd round new generation of quantum computers + quantum simulators most advanced platforms € 300 M)			

Objectives

- Build ecosystem, develop skills
- 2025 – Hybrid computing with a quantum accelerator
- 2030 – Cutting edge in quantum

Quantum in Europe: IRIS² and EuroQCI

under rescheduling!

Eagle 1 – LEO satellite for in orbit demonstration and early tests

- ESA & SES Astra Consortium funded – Eagle 1 launch in DEC 2025(?)

1st Generation - deployment of LEO satellites with EU technology

- A small number of satellites funded by ESA/EU
- Exchange quantum keys between different sites on EU territory interconnected LEO satellites + ground stations + terrestrial systems

2nd Generation - deployment of a fully operational system integrated with IRIS² for secure connectivity

- Full coverage of user and security requirements

❖ 26 Member States deploy national QCIs as of JAN 2023

- **Aim:** Initiate MS in QKD use, test architectures, develop use cases, develop skills and prepare for full deployment
- 265 participants (incl. 34 SMEs), >60 use cases (finance, healthcare, defence, industry, research, etc.)

❖ 6 Industry projects for maturing EU QCI technologies:

- QKD systems ready for integration into telecom networks
- QKD modules (QRNG, optical components), key management software, encryptors, QKD protocols

Quantum Sensing in the EU

Sensors with increased sensitivity and precision able to capture many physical quantities (**magnetic field, radiofrequency field, gravitation, movement...**), or that can take measurements even in **harsh conditions** (e.g. high pressure and temperature)

Quantum Sensors	Applications
QT-enhanced MRI	• Heart and brain imaging, spectroscopy (molecular imaging)
Accelerometers	• Atom interferometry to measure accelerations (satellite-free navigation)
Gradiometers	• NV-centres to measure gradients, such as a magnetic field or gravity
Gyroscopes	• Position for automated driving or indoor navigation
Atomic clocks	• GPS that works even underground and inside, communication (radar signal amplification)
Gravimeters	• Environmental/infrastructure monitoring (volcanoes, CO2 emissions) • Surveying (finding water basins and oil and gas reserves)
Other	• Measure temperature, electrical field, RF-field (wide-range frequency), ...

Quantum clocks

Quantum gyroscopes

Quantum accelerometers

Quantum gravimeters

Quantum NV centres

Quantum gradiometers

Quantum MRI scanners

European landmark achievements (2018-2021)

- *Metabolic microscope* x100,000 more sensitive than state of the art
- *Quantum polarizer enhancing MRI* signal x10,000 at room temperature
- *Optical lattice clock* off by only one second over the age of the universe
- *Imaging sensors for THz waves* with 1mm spatial resolution and acquiring of 20 000 frames / sec
- Some of the world's most advanced q. sensors based on **NV centres in ultrapure diamonds** (cryogenic scanning probe system, spectrum analysers with extended bandwidth, NV magnetometers under extreme pressure, etc)

NEXT
STEPS

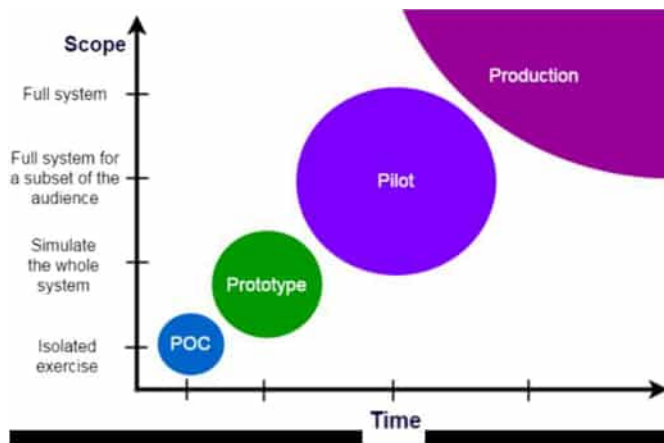

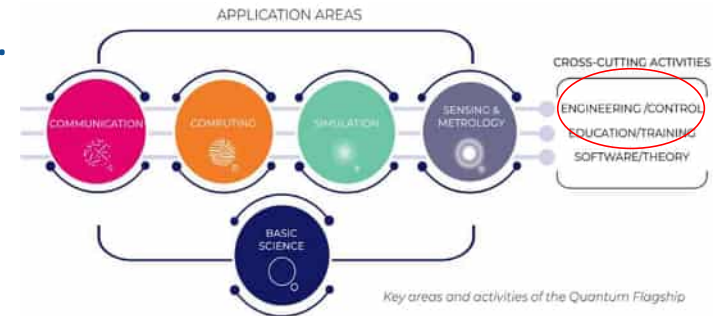

- ✓ **Miniaturization**
- ✓ **Chips Fabrication**
- ✓ **Testing & Experimentation**

Quantum Flagship: Fostering Industrial Uptake of QT

Deploying pilot production and testing capabilities for QT.

Key goals:

Qu-Pilot: Establish engineering methods and processes that are scalable at industrial level

Qu-Test: Establish a (open-access) network of QT testing and experimentation infrastructure for the needs of industry

Leverage EU facilities that offer such scalable methods, processes in pilot scale, and testing and experimentation services to all EU 27

→ Essential for the success of the European businesses enabling QT in all the application areas

Thank you
